

OMNICARE PHARMACY

Official System Documentation & Feature Guide

OmniCare Pharmacy - Complete System Manual

*****Last Updated:***** March 16, 2026

*****Status:***** Version 2.0 (End-to-End Workflow Complete)

1. Core Platform Overview

OmniCare is a high-end, end-to-end pharmacy solution built with *****Django (Backend)*****, *****React (Frontend)*****, and *****Meilisearch (Search Engine)*****. It features a modern Glassmorphism UI and a robust medical-grade fulfillment workflow.

2. Customer Features (The Shopping Flow)

Smart Search & Categorization (Tata 1mg Style)

- *****Meilisearch Integration*****: Instant, typo-tolerant search across 68+ medicines.
- *****Medicine Substitutes (Cheapest Alternatives)*****: Users can now see cheaper alternatives with the exact same salt composition, helping them save money.
- *****Detailed Medical Info*****: Product pages now include Salt Composition, Side Effects, Expert Tips, and Safety Warnings.
- *****Dynamic Filters*****: Filter by Category (Heart Health, Antibiotics, etc.), Availability, or Prescription requirements.

Checkout & Payments

- *****Address Management*****: Customers can save multiple delivery addresses with GPS coordinate support for geofencing.
- *****Modern Payment Options*****:
 - *****Razorpay (UPI/Scan)*****: Instant domestic payments via UPI, Google Pay, PhonePe, and Netbanking.
 - *****Stripe (Cards)*****: Global card processing for Credit/Debit cards.
 - *****Cash on Delivery (COD)*****: For traditional offline settlement.
- *****Order Tracking*****: A dedicated "My Orders" area to track order status (Pending → Processing → Shipped → Delivered).

Prescription System

- **Rx Lock**: Prescription-only medicines are automatically locked until a valid prescription is uploaded.
- **My Prescriptions**: A user-specific gallery to view historical medical uploads and their approval status from the pharmacist.

3. Pharmacist & Admin Features (The Operations)

■ ■ Prescription Verification Dashboard

- **Location**: `Manage → Verify Prescriptions`
- **Workflow**: Staff can view high-resolution prescription images, check patient details, and **Approve/Reject** them with one click.
- **Safety**: Approval instantly unlocks the customer's ability to proceed with their order.

Order fulfillment Pipeline

- **Real-time Queue**: A professional dashboard to manage the fulfillment lifecycle.
- **Status Control**: Transition orders through:
- **Pending**: New orders awaiting payment or initial review.
- **Processing**: Packing and inventory reservation stage.
- **Shipped**: Handover to delivery partner.
- **Delivered**: Final confirmation of receipt.

Business Insights (Analytics)

- **Revenue Tracking**: Live visualization of total sales and average order values.
- **Inventory Analytics**: Modern progress bars showing top-selling medicines and stock exhaustion rates.
- **Customer CRM**: View recent customer activities and order frequencies.

4. Technical Architecture & Safety

Inventory Management

- **Atomic Stock Reduction**: Stock is automatically deducted only when an order is successful.
- **Auto-Disable**: When stock hits zero, the product is automatically hidden from search results and disabled for purchase.

Security & Permissions

- **JWT Authentication**: Secure, token-based login.
- **Role-Based Access**: Admins see dashboards; Customers see the store.
- **Database Safety**: Wrapped in `transaction.atomic` to prevent data corruption during high-traffic order placements.

5. How to Update

This manual is managed by your **Assistant (Antigravity)**.

- **Auto-Update Policy**: Every time we implement a new feature (e.g., SMS alerts), I will update this document.
- **PDF Generation**: Run ``python generate_manual.py`` to get the latest PDF version of this guide.
